

Author declaration

Acknowledgements

Authors acknowledge the patient who consented to publish the data and the health care team and para medical team who involved in the management.

Author Contributions

All authors examined, assessed and involved in the management of the patient. All authors collected and analyzed data. All authors read and approved the final manuscript.

Funding sources

Not applicable

Availability of data and materials

Data sharing not applicable to this article as no datasets were generated or analyzed during the current study.

Ethics approval and consent to participate

Written informed consent was obtained from the patient.

Competing interests

The authors declare that they have no competing interests.
